About the International Webinar

Botany and Zoology offers an integrated approach to deal with taxonomy, health care, agriculture and environment through innovative and advancement of technologies. Botany and Zoology are the applied disciplines play a vital role in research and development. This forum offers to raise the most of the interesting issues in current scenario and strategies among scientific community and academicians. So on the occasion of the “2021-**Golden jubilee year of Anasaheb Magar Mahavidyalaya, Hadapsar**, we are conducting the International Webinar entitled “**Glory of Funga - 2021**” on **21st and 22nd October, 2021**.

About the funga

As we all know that Wild and IUCN SSC become first global organizations to call for the recognition of fungi as one of three kingdoms of life critical to protecting and restoring Earth. Environmental groups and the Chilean Ministry of Environment join the Fungi Foundation in committing to promote inclusive "fauna, flora and funga" language and ensure that fungi which are critical to all life on Earth are integrated into conservation strategies

Many congratulations to the leadership of the Fungi Foundation, both Re: Wild and the Species Survival Commission (SSC) of the International Union for Conservation of Nature (IUCN) announce their commitment to use “mycologically inclusive” language in their internal and public-facing communications (“fauna, flora and funga” and “animals, fungi and plants”) and to incorporate fungi in conservation strategies with rare and endangered plants and animals. (IUCN, 2021)

Although fungi underpin life on Earth, they have been overlooked and underappreciated, and largely excluded from conservation strategies and environmental laws. **There would be no life on Earth without fungi: the yeasts, molds and mushrooms that are critical to decomposition and forest regeneration, mammalian digestion, carbon sequestration, the global nutrient cycle, antibiotic medication, and the bread, beer and chocolate we consume.** Trees would not be able to live on land without fungi. Wild is proud to embrace the ‘f’ word and support the 3F initiative,” said Barney Long, Re: wild’s senior director of conservation strategies. “Fungi are truly our planet’s life force, the great connectors, decomposers, regenerators. By ensuring that all macroscopic life is a key consideration in our work, including fungi, we can effectively protect and restore entire ecosystems.

Furci said. "As Re: Wild, the IUCN SSC, and the Chilean government join the Fungi Foundation in recognizing fungi's key role in saving the diversity of life on our planet, it is also essential to accurately reframe language accordingly. Using mycologically inclusive language is not merely symbolic but essential and defining. (IUCN, 2021)

Greg Mueller, chair of the IUCN SSC Fungal Conservation Committee and chief scientist & Negaunee vice president of science, Chicago Botanic Garden quoted that “Explicitly being recognized as being on par with animals and plants by the conservation community is a huge win for fungi. Assigning fungi the same status as animals and plants acknowledges their essential and inseparable role in conserving and managing biodiversity.” (IUCN, 2021)

Although most people are familiar with mushrooms—the reproductive organs of some fungi these fascinating organisms actually live their lives as branching, fusing networks of cells known as mycelium, an underground network that winds its way through plant roots and shoots, grasslands and forests, and in animal bodies and sediments on the ocean floor. More than 90 percent of plants depend on symbiotic fungi, which supply plants with critical nutrients and defend them from disease. (IUCN, 2021)

The Chilean government has also endorsed the declaration of the 3F initiative with a sponsorship signed in July by the Ministry of the Environment. The declaration was co-authored by Giuliana Furci (Founder and CEO of the Fungi Foundation), Merlin Sheldrake (biologist and best-selling author of “Entangled Life”) and César Rodríguez-Garavito (Professor of clinical law at New York University School of Law). Chile is the first and only government in the world that includes fungi in environmental legislation. The declaration calls for other world governments to follow Chile’s lead. (IUCN, 2021))

According to Royal Botanic Gardens, Kew, fungi are “distinctive organisms that digest their food externally by secreting enzymes into the environment and absorbing organic matter back into their cells.” They are one of three macroscopic kingdoms of life, together with animals (fauna) and plants (flora), and one of six total kingdoms of life. Mycologists estimate that there are somewhere between 2.2 and 3.8 million species of fungi on Earth, though only 8% of these are currently scientifically documented. Each year up to 2,000 new species are discovered globally. (IUCN, 2021)

जायचे. या वर्षीपासून फंगीचे आंतरराष्ट्रीय स्तरावरील नामकरण फंग्गा असे करण्यात आले, अशी माहिती परिषदेचे समन्वयक डॉ. किरण रणदिवे यांनी सांगितली. उपप्राचार्य डॉ. प्रशांत मुळे यांनी बुरशीला मिळालेल्या नवीन नावाबद्दल विचार मांडले.
