ABSTRACT

In this work, NiCo₂O₄ microflowers are developed via hydrothermal method. The impact of precursor concentration on morphology and supercapacitor performance is investigated. The XRD, FTIR and XPS study reveals the formation of NiCo₂O₄. The FE-SEM study shows the formation of microflower-like morphology. The NiCo₂O₄ with molar ratio Ni:Co = 1:2 exhibited a BET specific surface area of 147.3 m² g⁻¹. The supercapacitor study confirms the optimized NiCo₂O₄ electrode showed a maximum sp. capacitance of 747.4 F g⁻¹ at 5 mV s⁻¹. It exhibited highest energy density of 9.27 Wh kg⁻¹ (@55.55 W kg⁻¹) and 82.32% capacity retention over 5000 cycles.

1. Introduction

In the last decades, research is more focused on modern electrode materials for energy storage devices (ESD) so as to complete the increasing demand for highly efficient renewable devices [1]. Among the various ESDs, supercapacitors are noteworthy candidates because of its excellent coulombic efficiency, high cyclic stability and higher power density than other ESDs [2]. The different conducting polymers [3], transition metal oxides like RuO₂ [4], MnO₂ [5], NiO [6], and Co₃O₄ [7], CeO₂ [8] has been widely studied as an electrode for pseudocapacitors. The ternary metal oxides (TMOs) deliver greater specific capacitance (sp. capacitance) than conducting polymers as it contains multi-electron redox reactions [9]. In addition, due to their rich redox-active sites and improved electronic conductivity, TMOs show better capacitive performance than single metal oxides [10]. Among the various TMOs, battery type nickel cobaltite (NiCo₂O₄) has been considered as promising electrode material in supercapacitor applications [11]. The high electrical conductivity and improved sp. capacitance of NiCo₂O₄ are due to the contributions from different valence states of the cobalt and nickel ions [12].

Researchers have tried to improve supercapacitor performance by synthesizing NiCo₂O₄ with different morphologies. Sethi et al. [13] developed NiCo₂O₄ nanorods using the low-temperature solvothermal method. The prepared NiCo₂O₄ nanorod reported 440 F g⁻¹ sp. capacitance at a scan rate of 5 mV s⁻¹. Also, it exhibited 94% initial capacity retention over 2000 cycles. Waghmode et al. [14] prepared rodlike to flowerlike NiCo₂O₄ via chemical bath deposition method by varying reaction times. The optimized NiCo₂O₄ electrode achieved a maximum sp. capacitance of 540 F g⁻¹ at a scan rate of 5 mV s⁻¹ and 93.5% initial capacity retention over 1000 cycles. Han et al. [15] synthesized NiCo₂O₄ featherlike arrays by hydrothermal method. The NiCo₂O₄ electrode reported a maximum sp. capacitance of 450 F g⁻¹ at 0.5 A g⁻¹. This electrode exhibited outstanding cyclic stability of 139.6% over 3000 cycles.

A literature survey showed that hydrothermal is a noteworthy technique for synthesizing different inorganic nanostructures with high complexity and structural specialties [10]. In the present investigation, we have synthesized a microflower-like structure of NiCo₂O₄ by using a hydrothermal method and used it as electrode material for supercapacitor application. The effect of Ni:Co concentration on the surface morphology and electrochemical supercapacitor performance of the NiCo₂O₄ material is investigated.

Young India Challenges program Report

On the 15 may 2023, Annasaheb Magar Mahavidyalay Hadpsar Pune-28 and Masum NGO collaborative organize program on youth challenges, at startof the program college Pricipal Dr. Nitin Gorpade, welcome to guest Dr. Ramesh Avasthi (Masum Founder and Co- convinour)

Principal delivered his speech in which he told that today generation facing many challenges and many of them losses their values. Therefore, big responsibility came on education system to guide to students on proper way.

Masum founder Dr. Ramesh Avasthi stated following things in his speech. When it comes to who a youth is, there is no universally agreed definition and age rate of who a youth is. However, it still has its acceptable explanation. Youth could be defined as the time or stage in life when a person is young which is usually between the time of childhood and adulthood. It's that stage in life when one is filled with vigor, freshness, good appearance, agility etc. defining a youth (was challenging as many people had different opinions as to who a youth is), they could not be classified within a specific age range. The age of being a youth ranges from one country to another, however it would fall at the age when the individual is full of life. Just as it can't be linked within a specific age, its end thereof cannot be linked to a specific activity or what the individual has failed to do. Being a youth is an experience which would shape the person's level of understanding to life and his or her level of dependency on others.

The rate of drug availability and intake at this present age is so alarming and it is seen in every corner of the streets. The use of drugs is constantly promoted in movies and in music productions making it look appealing to the youths. Irrespective of the fact that the youths make up the most population in a country, they are the most marginalized when it comes to politics and decision making. As the name implies, it means the state where youths cannot find work to do in their communities or nation or there are no job placements available for the youths. In providing solutions for unemployment in the society, a market system approach should be taken which would stand to address the root cause of the unemployment problem being encountered in the society, instead of the symptoms which it provides.

Solutions To The Problems of the Youth:- The solution to drug abuse is really in the hands of the people. To reduce the increase of drug abuse in the society, the youth should be sensitized on the effects of drug abuse to their body and the society. The youths of today need real opportunities to function in the area of politics and contribute massively and practically to practical solutions.

Prof. Sangita Deokar stated purpose and future plan of MOU. Prof. Ashwini Doke gave a vote of thanks. Vice Principal Dr. Prashant Mully and Dr. Shubhangi Auti too present for program. Prinicpal Dr. Nitin Ghorpade gave valuable guidance for the program success.

was 15 g, fruits - 50 g, bark - 40 g, young shoots - 27 g. Weights of the above samples were subsequently used for extraction.

Extraction

The extraction was performed using a Soxhlet extractor using various solvents (diethyl ether, ethanol and water) which were collected in a 250 ml beaker [16, 17].

Separation and purification

Ethanol, water, and diethyl ether extracts obtained from samples of various parts of *Cassia fistula* L. were purified by evaporating the solvents to dryness for 40-45 min on a water bath at the temperature of 100 °C to obtain purified powders. [17].

Experiments in the isolated tissue bath (ITB)

An ex vivo isolated preparation of chicken ileum has been used for a long time in India for testing biologically active substances. Its advantage is the absence of damage to the life of experimental animals [18]. This method reveals the responses provided by many different receptors to the effects of various extracts.

Tissue and organs placed in the ITB were oxygenated with carbogen and stored in Ringer's solution with lactic acid. The studied extracts and control specimens were injected directly into the chamber at a temperature of 37 °C.

The contact time was maintained in accordance with the standard protocols. A five-minute time cycle was observed, i.e. 30 s baseline recording, 90 s contact (drug response) and subsequent 3 washes at 1 min intervals [19, 20].

ITB was equipped with its own sensor and precise positioning device for quick adjustment and measurement based on an analog-to-digital converter. Extraction of signals and recording of input data were carried out in real time. The obtained data were processed and analyzed. When analyzing the results, the dynamics of the indicators of the contractile activity of the intestinal segments was evaluated in comparison with the background values.

Based on the tissue responses to the extracts impact, the dose-response curves were built, which made it possible to primarily estimate the activity of the extracts and determine its pharmacological profile.

RESULTS AND DISCUSSION

Chicken ileum tissue was used to study neuromuscular (smooth muscle) stimulation by *Cassia fistula* L. extracts. Solutions of various extracts (volume 250 ml) and control relax-stimulators of neuromuscular contacts (caffeine, diazepam) were introduced into the ITB, and the increment in the length of the intestinal segment placed in the ITB was measured during induced relaxation of smooth muscles.

Neuromuscular tissue responses varied depending on the drug dose (Table 1) and exposure time (Fig. 1). At the

same time, extracts of raw materials obtained from various parts of the plant also demonstrated different biological activity. Ether, ethanol and aqueous extracts of the fruits showed a generally high relaxing activity in comparison with control relaxation stimulants – their dose sufficient for a physiological response varied from 28 ml (ethanol extract) to 165 ml (aqueous extract), while the minimum for a physiological response dose of caffeine was 155 ml, and diazepam – 75 ml. Leaves extracts exhibited a more modest relaxing activity compared to control stimulants (the effective dose range was 58–232 ml), and aqueous extracts were already inferior in activity to control stimulants (the dose varied from 225 to 232 ml). A similar situation was observed during testing of extracts of young shoots, with aqueous extracts showing even more modest results (effective dose ranged from 325–330 ml), while alcohol and ethanol extracts of young shoots performed better than the corresponding leaf extracts and limits. The effective dose variations are limited here to 62–102 ml. The most modest results in terms of a dose sufficient for a physiological response were demonstrated by root extracts: the effective dose of aqueous extracts varied within 315–329 ml, ethanol – 254–277 ml, and ethereal – 76–82 ml. The ethanol extract of *Cassia fistula* L. fruits (25–31 ml) showed the best result in relation to the effective dose.

The reaction of the experimental tissue to the action of extracts and control relaxation stimulants did not manifest itself immediately, but after a certain time (Fig. 1), usually within 1–4 hours. At the same time, the best results (i.e., the shortest reaction time) were again shown by the ether extracts of fruit and bark, under the influence of which a physiological response was obtained in less than 1 hour.

The ethanol extracts from fruit, leaves, shoots, and bark, although they had a lower effective dose (Table 1), showed rather significant exposure time, exceeding that demonstrated by the control drugs – caffeine and diazepam.

Perhaps, even more significant than effective dose and exposure time is the strength of the physiological response. The Figure 2 shows the protocol of the experiment, which makes it possible to evaluate the magnitude of elongation of the intestinal segment in response to the influence of both control relax stimulants and the tested extracts of *Cassia fistula* L.

The most significant responses, i. e. an increase in length by 20 mm, was recorded when the tissue was exposed to an aqueous fruit extract. The ether and ethanol extracts of the leaves, the ether extract of the fruits, the ether and ethanol extracts of the shoots also had a high activity.

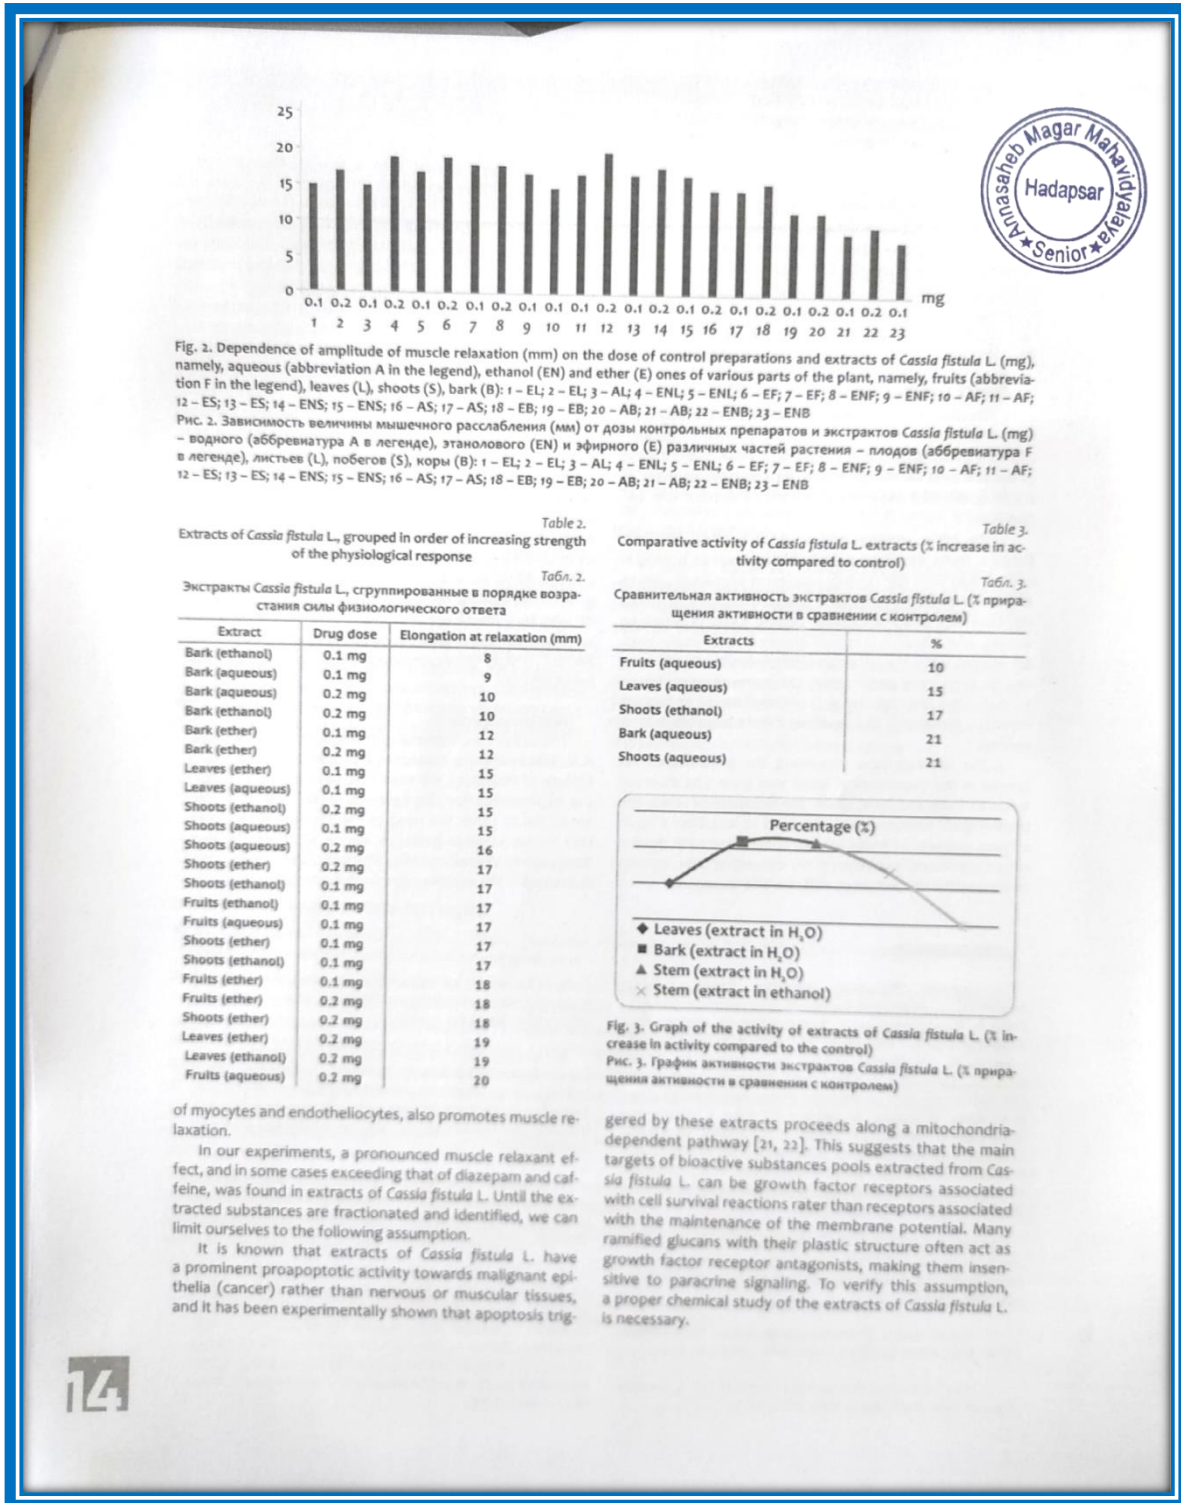

In Table 2, the results of the study of the dose-effect relationship are presented for each type of extract in order of increasing force of the reaction of the experimental tissue. This allows us to identify the most promising extracts for further study: aqueous, ethanol and ether extracts of fruits and alcoholic and ether extracts of leaves.

One more parameter should be considered, namely the increase in the biological activity of extracts in comparison with the control (solvent without a pool of extracted substances). It allows one to evaluate the immobilizing ability of a pool of metabolites with any given solvent and should also be taken into account when selecting the most promising compositions for in-depth biochemical and biomedical research. These data are presented in Table 3 and Figure 3.

By this parameter, it is possible to distinguish aqueous extracts of young shoots and bark, which indirectly may indicate a noticeable content of hydrophilic glucans in this raw material as well as an ethanol extract of young shoots.

The control substance diazepam (7-chloro-1,3-dihydro-1-methyl-5-phenyl-2H-1,4-benzodiazepin-2-one) was selected by us as a muscle relaxant and GABA receptor agonist that promotes myocytes relaxation and brake signaling in autonomic nervous system. Caffeine (1,3,7-trimethyl-1H-purine-2,6(3H,7H)-dione), acting on the calcium channels

of myocytes and endotheliocytes, also promotes muscle relaxation.

In our experiments, a pronounced muscle relaxant effect, and in some cases exceeding that of diazepam and caffeine, was found in extracts of *Cassia fistula* L. Until the extracted substances are fractionated and identified, we can limit ourselves to the following assumption.

It is known that extracts of *Cassia fistula* L. have a prominent proapoptotic activity towards malignant epithelia (cancer) rather than nervous or muscular tissues, and it has been experimentally shown that apoptosis trig-

gered by these extracts proceeds along a mitochondria-dependent pathway [21, 22]. This suggests that the main targets of bioactive substances pools extracted from *Cassia fistula* L. can be growth factor receptors associated with cell survival reactions rather than receptors associated with the maintenance of the membrane potential. Many ramified glucans with their plastic structure often act as growth factor receptor antagonists, making them insensitive to paracrine signaling. To verify this assumption, a proper chemical study of the extracts of *Cassia fistula* L. is necessary.

АННОТАЦИЯ. Кассия дудчатая (*Cassia fistula* L.) – растение из семейства бобовых (*Fabaceae*), издавна используемое в традиционной медицине. Целью настоящего исследования является оценка воздействия экстрактов растительного сырья *Cassia fistula* L. в виде специальных химических растворов определенной концентрации на гладкую мускулатуру кишечника животного.

Дизайн эксперимента предполагал идентификацию растительного сырья, его сушку, измельчение, экстрагирование растворимых фракций, очистку водного, эфирного и этанолового экстрактов и их испытание на тканях подвздошной кишки курицы домашней, извлеченных *ex vivo*.

Далее определялась реакция экспериментальной ткани на воздействие экстрактов и контрольных релакс-стимуляторов.

Для исследований отбирался материал кур вида *Gallus gallus* L. (*Gallus gallus domesticus* L.) (курица индийская, или банкивская, или домашняя).

Было показано, что эфирный, этаноловый и водный экстракты плодов *Cassia fistula* L. проявляли в целом высокую релаксирующую активность в сравнении с контрольными релакс-стимуляторами, экстракты листьев проявляли более скромную релаксирующую активность, подобная ситуация наблюдалась в ходе тестирования экстрактов молодых побегов, причем водные экстракты показали еще более скромные результаты, в то время как спиртовой и этаноловый экстракты молодых побегов проявили себя лучше, чем соответствующие экстракты листьев, а наиболее скромные результаты с точки зрения дозы, достаточной для физиологического ответа, продемонстрировали экстракты корней.

Проведенная первичная оценка активности экстрактов *Cassia fistula* L. позволяет выделить в качестве наиболее перспективных для дальнейшего химического изучения пулы веществ, концентрирующихся в этаноловом экстракте плодов, проявляющем минимальную эффективную дозу, в эфирных экстрактах плодов и коры, демонстрирующих наименьшее время реакции и в водных экстрактах молодых побегов и коры, демонстрирующих наивысший процент приращения активности в сравнении с контролем.

В ходе исследования мы получили качественные и количественные результаты по сокращению гладкой мускулатуры в тканях подвздошной кишки курицы, что позволило нам оценить эффект воздействия водных экстрактов материалов *Cassia fistula* L. и определить прогноз фармакологического профиля лекарственного средства.

КЛЮЧЕВЫЕ СЛОВА: кассия дудчатая (*Cassia fistula* L.); биологически активные вещества; лекарственные средства; растительное сырье; водные экстракты растения; подвздошная кишка курицы домашней; традиционная медицина; камера для изолированных тканей

Field Visit to Jagruti Rehabilitation Centre

Date :- 09/05/2023

Address :- Zhagde Wasti, near loni tall naka, Near kudale Mazuti showroom, Manjri farm, Pune - solapur road, Hadapsar, pune - 27

On 9th May 2023, 63 students from the psychology department with two professors, Prof. Deokar.S.M & Prof. Dake.A.K. went for a one day field visit to Jagruti Rehabilitation Centre with an aim to gain first hand practical experience of the rehabilitation and health care setting.

Visit to rehabilitation centre was very informative, in the society there are various misconceptions and stigmas about the rehabilitation centre but after visiting the centre, I got the real experience of functioning of the centre. Whole tour of rehabilitation centre gave the understanding of how a rehabilitation centre works? How they give treatment to their patients with what facilities they operate the centre. The whole team of Annasaheb Magar Mahavidyalaya was guided by Dr. Amashinde & his team, who explained in detail about the functioning of their centre & the speciality of their centre.

DEPARTMENT OF PSYCHOLOGY

In this rehabilitation centre they have rooms called 'Acute rooms' in which patients severe symptoms are admitted. They also have 'General wards' for patients of addiction. In the centre they gave speciality treatment to Dementia patients. In the centre they have separate wards for male & female patients. They also provide special rooms for individual patients. In this way they distributed their patients. From the tour now I am aware of how a rehabilitation centre functions, also I was able to relate what I have read, studied or learned from course.

Jagruti rehabilitation centre is serving in the society in the field of mental health care for past 18 years, which was founded by Vijaya Shinde. They have 5 branches in three cities, Mumbai, Delhi & Pune. The pune branch gives treatment services for Mental wellness, Dementia & De-addiction. The centre functions with team of psychiatrists, psychologists, counsellors, general physician and other helping staff.

This field visit gave the inside information about a rehabilitation centre I got to know through Dr. Amar shinde sir and team. Specially the guidance and the interactive session with Dr. Amar shinde sir and team was a great learning experience. It was an amazing first hand experience in clinical psychology & psychology rehabilitation.
