ABSTRACT :

This paper is an analysis of what the impact of GST (Goods and Services Tax) will be on Indian Tax Scenario. Here stated with a brief description of the historical scenario of Indian taxation and its tax structure. Then the need arose for the change in tax structure from traditional to GST model. GST has be detailed discuss in this paper as the background, silent features and the impact of GST in the present tax scenario in India. The Goods and Services Tax (GST) is a value added tax to be implemented in India, the decision on which is pending. GST is the only indirect tax that directly affects all sectors and sections of our economy. Ignorance of law is no excuse but is liable to panel provisions, hence why not start learning GST and avoid the cost of ignorance. Therefore, we all need to learn it whether willingly or as compulsion. The goods and services tax (GST) is aimed at creating a single, unified market that will benefit both corporate and the economy. The changed indirect tax system GST-Goods and service tax is planned to execute in India. Several countries implemented this tax system followed by France, the first country introduced GST. Goods and service tax is a new story of VAT which gives a widespread setoff for input tax credit and subsuming many indirect taxes from state and national level. The GST Implementation is not yet declared by government and the drafting of GST law is still under process and a clear picture will be available only after announcement of Implementation. India is a centralized democratic and therefore the GST will be implemented parallel by the central and state governments as CGST and SGST respectively. The objective will be to maintain a commonality between the basic structure and design of the CGST, SGST and SGST between states .In this article, I have started with the introduction, in general of GST and have tried to highlight the objectives the proposed GST is trying to achieve. Thereafter, I have discussed the possible challenges and threats; and then, opportunities that GST brings before us to strengthen our free market economy.

Key Words: GST, CGST, SGST, VAT, INPUT CREDIT

Objectives:-

1. To study of concepts of GST.
2. To study of benefits of GST.
3. To study of Types of GST.

Concepts of GST.

Introduction of the Value Added Tax (VAT) at the Central and the State level has been considered to be a major step – an important step forward – in the globe of indirect tax reforms in India. If the VAT is a major improvement over the pre-existing Central excise duty at the national level and the sales tax system at the State level, then the Goods and Services Tax (GST) will indeed be an additional important perfection – the next logical step – towards a widespread indirect tax reforms in the country. Initially, it was conceptualized that there would be a national level goods and services tax, however, with the release of First Discussion Paper by the Empowered Committee of the State Finance Ministers on 10.11.2009, it has been made clear that there would be a “Dual GST” in India, taxation power – both by the Centre and the State to levy the

taxes on the Goods and Services. Almost 150 countries have introduced GST in some form. While countries such as Singapore and New Zealand tax virtually everything at a single rate, Indonesia has five positive rates, a zero rate and over 30 categories of exemptions. In China, GST applies only to

GST stands for “Goods and Services Tax”, and is proposed to be a comprehensive indirect tax levy on manufacture, sale and consumption of goods as well as services at the national level. Its main objective is to consolidate all indirect tax levies into a single tax, except customs (excluding SAD) replacing multiple tax levies, overcoming the limitations of existing indirect tax structure, and creating efficiencies in tax administration. Simply put, goods and services tax is a tax levied on goods and services imposed at each point of sale or rendering of service. Such GST could be on entire goods and services or there could be some exempted class of goods or services or a negative list of goods and services on which GST is not levied. GST is an indirect tax in lieu of tax on goods (excise) and tax on service (service tax). The GST is just like State level VAT which is levied as tax on sale of goods. GST will be a national level value added tax applicable on goods and services. A major change in administering GST will be that the tax incidence is at the point of sale as against the present system of point of origin. According to the Task Force under the 13th Finance Commission, GST, as a well designed value added tax on all goods and services, is the most elegant method to eliminate distortions and to tax consumption. One of the reasons to go the GST way is to facilitate seamless credit across the entire supply chain and across all States under a common tax base. It is a tax on goods and services, which will be levied at each point of sale or provision of service, in which at the time of sale of goods or providing the services the seller or service provider can claim the input credit of tax which he has paid while purchasing the goods or procuring the service. This is because they include GST in the price of the goods and services they sell and can claim credits for the most GST included in the price of goods and services they buy. The cost of GST is borne by the final consumer, who can't claim GST credits, i.e. input credit of the tax paid.

Benefits of GST

1. GST provide comprehensive and wider coverage of input credit setoff, you can use service tax credit for the payment of tax on sale of goods etc.
2. CST will be removed and need not pay. At present there is no input tax credit available for CST.
3. Many indirect taxes in state and central level included by GST, You need to pay a single GST instead of all .
4. Uniformity of tax rates across the states
5. Ensure better compliance due to aggregate tax rate reduces.
6. By reducing the tax burden the competitiveness of Indian products in international market is expected to increase and there by development of the nation.

Types of GST

1. Central Goods & Service Tax (CGST)

As per the Central Goods & Services Tax Act 2016, CGST is the centralized part of GST that subsumes the present central taxations and levies- Central Sales Tax, Central Excise Duty, Services Tax, Excise Duty under Medical & Toiletries Preparation Act, Additional Excise Duties Countervailing Duty (CVD), Additional Custom Duty and other centralized taxations.

CGST is applicable on the supply of goods and services of standard services and commodities which can be amended periodically by a specialized body under the central government. The revenue collected under CGST belongs to the central government. The input tax is given to the state governments which they can utilize only against the payment of CGST.

2. State Goods & Services Tax (SGST)

SGST is an important part of GST. It stands for State Goods & Services Tax as per the 2016 GST bill. Various taxations and levies under the state authority are subsumed by SGST as one uniform taxation. It includes the amalgamation of State Sales Tax, Luxury Tax, Entertainment Tax, Levies on Lottery, Entry Tax, Octroi and other taxations related to the movement of commodities and services under state authority through one uniform taxation- SGST.

Revenue collected under SGST belongs to the State Government. However, the mainstream framework of the state governing body will be supervised by the central government. Each state will be having their own State Authority to collect SGST.

3. Integrated Goods & Services Tax (IGST)

GST focuses on the concept of one tax, one nation. IGST stands for Integrated Goods and Services Tax which is charged on the supply of commodities and services from one state to another state. For example, if the supply of goods and services occurs between Gujarat and Maharashtra, IGST will be applicable.

Under Article 269A of the Indian Constitution, the inter-state trade and commerce activities that involve the movement of commodities and services shall be levied with an integrated tax (IGST) under the GST regime. The Government of India will collect the revenue under IGST. Further changes can be made by the Goods and Services Tax Council of India.

4. Union Territory Goods & Services Tax (UTGST)

As we have already learned about CGST and SGST which are intra-state taxations and IGST which is inter-state, the union territories in India are accounted under a specialized taxation called Union Territory Goods and Services Tax as per the GST regime 2016. It will subsume the various taxations, levies and duties with one uniform taxation in Union Territories as well.

CONCLUSION

GST will surely boost the country's economic growth and ease of doing business in overall industrial sectors. The significant types- CGST, SGST, IGST and UTGST will provide a smooth mechanism of tax collection for the respective central, state and union territory governments of India. It will begin a new phase in India's economy by providing logistics and supply chain efficiency and state-based parity that the country requires the most.

GST is the most logical steps towards the comprehensive indirect tax reform in our country since independence. GST is leviable on all supply of goods and provision of services as well combination thereof. All sectors of economy whether the industry, business including Govt. departments and service sector shall have to bear impact of GST. All sections of economy viz., big, medium, small scale units, intermediaries,

importers, exporters, traders, professionals and consumers shall be directly affected by GST... One of the biggest taxation reforms in India -- the Goods and Service Tax (GST) -- is all set to integrate State economies and boost overall growth. GST will create a single, unified Indian market to make the economy stronger. Experts say that GST is likely to improve tax collections and Boost India's economic development by breaking tax barriers between States and integrating India through a uniform tax rate. Under GST, the taxation burden will be divided equitably between manufacturing and services, through a lower tax rate by increasing the tax base and minimizing exemptions.
